

Promoting growing partnerships™

When you treat Roundup Ready® crops with Alecto, you'll reap substantial cost savings with a glyphosate herbicide that's formulated to the highest level of purity.

Alecto is the quality-assured, cost-effective glyphosate herbicide that's being specified by more growers and dealers across the U.S. As word about Alecto spreads, the number of satisfied customers continues to grow.

Controls weeds consistently and relentlessly

When you partner with Alecto, you'll get consistent, relentless weed control over Roundup Ready crops, for total vegetation management, or for burn-down.

Alecto 41UL is formulated with no surfactant and 41% glyphosate. (This equates to 4 lbs. per gallon of the isopropylamine salt.)

This product requires the use of a nonionic surfactant. Growers can vary the percentage of surfactant, based on specific application conditions.

Alecto helps you grow your bottom line

You'll appreciate the overall value that Alecto delivers in terms of quality, service and pricing. The money you save by using Alecto glyphosate herbicide can also offset seed costs and tech fees.

In side-by-side comparisons with Roundup brands and generic glyphosates, Alecto offers you better value for your money. What's more, Alecto 41UL is the lowest-priced option in the Alecto line.

Relentless Weed Control™

41% glyphosate herbicide, with no surfactant

Key Alecto 41UL benefits

- Provides consistent and relentless weed control over Roundup Ready crops, for total vegetation management, or for burn-down.
- Approved for use on many Roundup Ready crops, including corn, cotton, soybeans and canola.
- Translocates through the entire plant and controls weeds down to the roots.
- Readily available in inventory when required.
- Superior value. Alecto 41UL is the lowest-priced glyphosate herbicide in the Alecto line.
- Backed by strong technical support, including professional research institutes and test laboratories.
- Gives growers complete control over surfactant types and rates.
